Services

Home Health

Home health service is provided by physician's order. Our team of medical professionals provides care and support to patients and family in patient's home. Our goal is to improve patient's physical function through rehabilitative or skilled nursing care.

In-Home Caregiving Service

Our in-home caregiving service is to assist our client's independence while living in their own home by providing ADLs/IADLs support. We will assist with bathing, toileting, meal preparation, housekeeping, and other tasks to promote independence and quality of life.

Care Management

Case managers evaluate individual's physical and psychosocial needs, create care plans, and coordinate necessary care and services. Our case management is to provide necessary care to promote independence among individuals who need support.

Home Visit Rehabilitation Service

Our licensed physical therapists and occupational therapists visit patient's home to evaluate the home environment, and create individual care plan and exercise menu.

Day Service

At our five day centers, we focus on rehabilitation, maintenance of physical functions and ADLs. Our licensed therapists create exercise menu based on the individual's needs and request. All exercise programs are overseen by licensed therapists. We also provide meals, bathing and recreation programs.

Rehabilitation Consultation

We provide consultation services to open and operate new home health, in-home caregiving service and day service. Our rehabilitation consultation specialists evaluate business operation, perform root-cause analysis, and make suggestions for improvements.
